

# **A Deep Dive into X's Community Notes (Part 1):**

**An Analysis of English and Spanish  
Notes Between 2021 and 2025**

# ◆ Introduction

## Why?

Community-driven moderation has emerged as a go-to approach for addressing misleading content online.

**X's Community Notes system is a prominent example of this approach.**

Meta

## Become a Footnotes contributor

Help the TikTok community be more informed by writing and rating footnotes.

### Write footnotes

See a video that you think needs more info? Write a footnote and give context.

### Rate footnotes

When a footnote gets enough helpful ratings, it becomes visible on TikTok.

### Be part of a community

Join a group of people helping improve TikTok for all.

TikTok

# ◆ Scope of Part 1

**1.76 million notes (2021–2025)**

## **Research Goals:**

- Understand structure, functionality, participation and publication dynamics - English and Spanish
- Uncover limitations
- Suggest potential improvements

# ◆ The Life Cycle of a Community Note

## Option 1

## Option 2

## Option 3

## Option 4

# Key Findings - About the Dataset

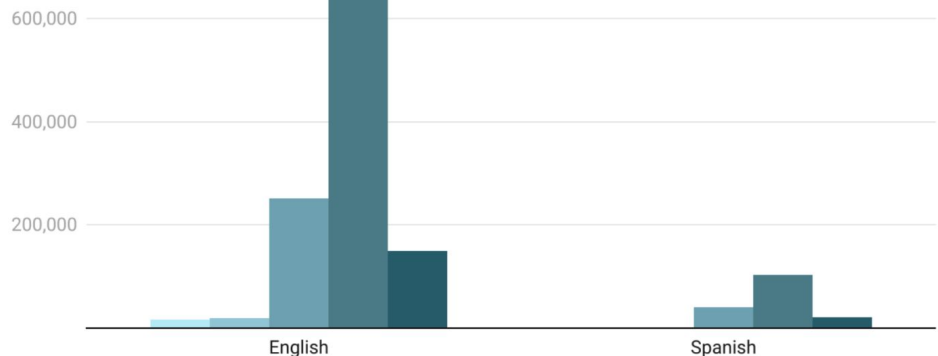

- ◆ Data is available, but **difficult to handle**; more context depends on API, which is expensive
- ◆ Public data **lacks crucial information** about location, language, and demographics

# Key Findings - Notes Submitted

Notes submitted by year and language

2021 2022 2023 2024 2025 (until March)

Created with Datawrapper

Of the 1.76 million notes submitted to the program:

- English: **63.8%** (1.12M), most used
- Spanish: **9.3%** (165K), second most used

# Key Findings - Notes Submitted

Notes submitted by month

Created with Datawrapper

◆ English submissions **have climbed steadily.**

Monthly contributions in Spanish range between **8,000 / 11,000.**

**English-centered**

# Key Findings - Notes Submitted

- ◆ The **number of contributors is growing**. Numbers doubled in both languages in 2024 compared to 2023.
- ◆ Contributor **participation is also expanding**, but a **bottleneck** has been detected.

Unique Contributors by Year and Language

year	English	Spanish
2021	2,976	16
2022	3,569	9
2023	44,479	10,798
2024	126,906	24,807
2025 (until March)	49,179	8,835

*If a contributor has submitted notes in English and Spanish on the same year, they will count on both columns*

Created with Datawrapper

# Key Findings - Notes Published

- ◆ In 2024, only **7.1%** of all English submissions were published.
- ◆ Only **4.7%** of all Spanish submissions were published.

Notes published by year and language

year	English	% of proposed (en)	Spanish	% of proposed (es)
2021	560	3.2%	0	
2022	1,886	8.7%	0	
2023	24,068	9.5%	1,480	3.6%
2024	48,933	7.1%	4,838	4.7%
2025 (until March)	7,429	4.9%	1,502	7.1%

Created with Datawrapper

# Key Findings - Notes Published

◆ Average time to publish dropped from 100+ days to **14 days** (2025).

Still **too slow** for countering viral misinformation.

Average delay in publishing 'helpful' notes, in days

English Spanish

# Key Findings - Notes Published

◆ **Consensus** in Spanish has gone up since 2023.

◆ **Success rate** stable in Spanish. **Decreasing** in English.

% of notes that were published, by month and language

Created with Datawrapper

How many contributors got notes published

year	English	% of total editors (en)	Spanish	% of total editors (es)
2021	384	12.9%		
2022	773	21.6%		
2023	9,788	22%	899	8.3%
2024	20,335	16%	3,118	12.5%
2025 (until March)	4,538	9.2%	1,094	12.4%

Created with Datawrapper

# Key Findings - Unrated Notes

- ◆ Many notes remain unrated:
  - 17%** of all English submissions
  - 15%** of all Spanish submissions (2025)
  - 8%** of all English submissions
  - 37%** of all Spanish submissions (2024)
- ◆ In Spanish, the percentage of unrated notes is **decreasing**.  
  
In English, it is **going up** – bottleneck.

## Distribution of note status in English

■ helpful (published) ■ not helpful (not published) ■ needs more ratings ■ no status

## Distribution of note status in Spanish

■ helpful (published) ■ not helpful (not published) ■ needs more ratings ■ no status

**Bottleneck**

## Key Findings - Unrated Notes

- ◆ **No system to manage or retire notes that are never reviewed**, raising concerns about fairness and long-term system efficiency

# Key Findings - Top Contributors

- ◆ Between 2021 and 2025:  
167,386 contributors in English;  
**18.5%** at least one note published
- ◆ Between 2023\* and 2025:  
33,340 contributors in Spanish;  
**13.7%** at least one note published
- ◆ Contributors are anonymized. No data regarding their location, identity, or profile. How can the public assess **consensus**?

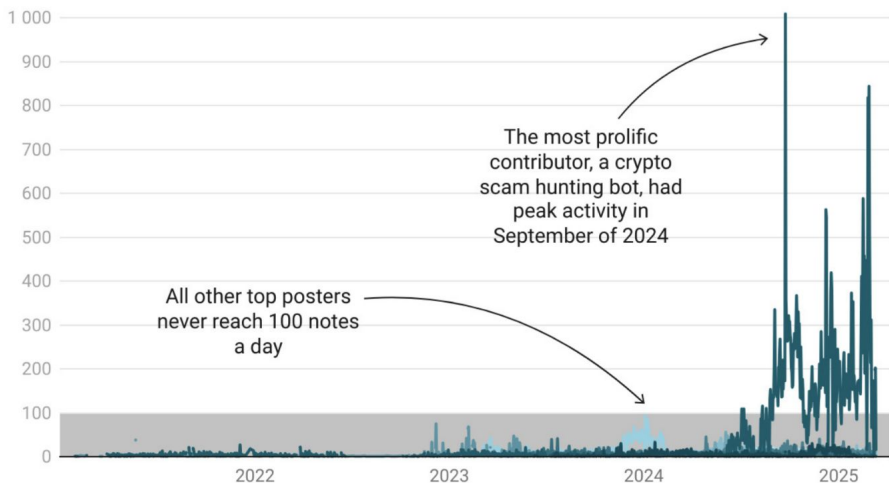

# Key Findings - Top Contributors

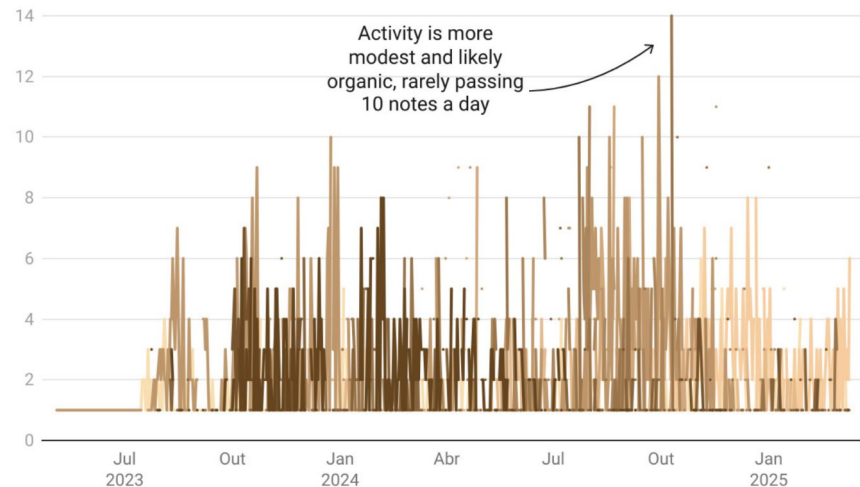

At least one automated contributor engaged in the program (EN). How can the public assess **quality control** and **editorial balance**?

## Daily activity of the top 10 posters in English

## Daily activity of the top 10 posters in Spanish

# ◆ Takeaways

1. **Less than 10% of X Community Notes submitted are ever published.**
2. The time it takes for a Community Note to go live on average has improved dramatically, dropping from **100+ days in 2022 to just 14 days in 2025, but still too slow.**
3. Community Notes go from submitted to published when a group of contributors **"with a diversity of perspectives" reach "consensus"** on the helpfulness of a note. Little data available that allows researchers to validate how those metrics of success are reached.
4. **Participation** in the Community Notes program is **rising across both English and Spanish.**
5. In English, **bottlenecks are starting to emerge** between the submission and publication stages of the Community Notes process.
6. **Spanish-speaking contributors' notes have lower success rates of publication** overall, despite uptick in Spanish-language notes and contributors.
7. The most prolific contributor in English is a bot-like account flagging crypto scams; in Spanish seems to be one related to political misinformation in the context of Venezuela.

## ◆ Recommendations: Data Transparency

- Make the public data filterable and available for download in parts, as well as in bulk.
- A system that allows researchers to navigate notes and to view which notes go with which posts through search could also be helpful for understanding trends and context of implementation.

## Recommendations: Information-Sharing

- Metrics of success such as “consensus,” “diversity of perspectives,” should be clearly defined and the information about trends disclosed to Community Notes participants, researchers and regulators.
- Consider disclosing trends, including but not limited to contributor demographic make-up and geographic breakdowns of contributors.

## ◆ Recommendations: Language Improvements

- Make available language labels that allow researchers to study language use without needing to use external tools to do so.
- Elevate notes made in languages other than English to boost visibility of contributions from the majority world.
- To the extent language labels can be applied within the dataset, companies should include language breakdowns in transparency reporting each year for, at a minimum, the top five most used languages in which notes are submitted.

## ◆ Recommendations: Backlogs and Bottlenecks

- Develop a system for managing, merging, or archiving unevaluated Community Notes.
- Companies should consider how they can assure the notes are put in front of contributors after initial submission on a cadence, and offer insights on why they may not be being seen.

## ◆ Recommendations: Speed

- From the perspective of speed alone, companies must recognize that community-driven moderation cannot be the only, or even the main, approach to curbing the spread of online harms on their platforms.
- Regular users of X cannot see when a Community Note was originally submitted or approved for publication. Companies should consider disclosing the time it took a note to go from submitted to published as people process content of posts and the notes that go with those posts.

## ◆ Recommendations: Automation

- To the extent AI technologies become more prolific and sophisticated, Community Notes contributors will no doubt find ways to use AI in their moderation. Companies implementing community-driven models of content moderation must think through guardrails for assuring AI is being used responsibly, if at all, and that any accounts doing so are disclosing the use.
